

Jet Ski Docks

The MPA Jet Ski Dock range is stylish, simple and extremely practical. The Jet Ski Dock design ensures that all craft are stored completely out of the water, thereby avoiding costly fouling of the craft and its mechanisms. Either drive on and drive off in seconds – with or without winch assistance. All Jet Ski Docks are easily attachable to existing floating or fixed structures.

These purpose shaped modules are designed for secure out of water jet ski and tinnie launching and storage. Jet Ski Docks makes getting your PWC in and out of the water much easier giving you more time to enjoy yourself. It's also easy to attach the module to any existing berthing structure and will keep your craft high and dry making it the perfect storage solution too.

Docking Your Jet Ski

Simply steer your craft towards the groove and drive it up the dock. Alternatively, steer your craft towards the groove then use a winch to haul your PWC onto the dock. The modules can withstand harsh weather conditions and rough treatment and the textured surface has been designed to maximise slip resistance.

Features

- Module size: 4.5m x 1.5m
- Versatile modular system
- Tough rotomoulded polyethylene
- Carrying capacity of 450kg
- Available in a range of colours
- UV and impact resistant
- Fits tinnies up to 4.1m
- Easily demountable and movable
